Experience

Web Developer September 2024 – Present
Nail Order *Glasgow, UK*

- Own custom Shopify Liquid theme and storefront UX: lazy-loading and asset discipline, image/CLS work for Core Web Vitals, and replacing paid third-party widgets with native theme patterns where it cut cost and load.
- Shipped **Expo / React Native** mobile apps to iOS and Android using Expo Router: single **Apollo** client with typed GraphQL codegen routing **Storefront API** vs **Customer Account API**; OAuth/PKCE login bridged to **Firebase** for app-only data; Shopify Checkout Sheet; **EAS** builds and OTA updates.
- Built **Remix** Shopify embedded admin app (**Polaris**, App Bridge): **Customer Account UI extensions** and theme blocks; **Firestore** + Storage for operational workflows; **Mux** direct uploads + webhooks; Shopify webhooks for restock notifications and idempotent order-lifecycle pushes to the app.
- Delivered **React Router 7** embedded app for bundle merchandising: bundle definitions as **Shopify metaobjects**, **Prisma** session storage, Fly.io deployment (Litestream-ready layout).
- Built **React Router 7** wishlist and loyalty rewards app (**Polaris**, App Bridge): multi-surface wishlists via app proxy, Customer Account UI extension, and theme block with shared **Firestore**; **orders/paid** rewards engine (metaobject rules → store credit/loyalty) with idempotent SQLite ledger; Fly.io + Litestream.

Frontend Developer April 2023 – August 2024
Galore *London, UK (Remote)*

- Designed and launched a visually striking, fully responsive custom Shopify Liquid theme from Figma mockups, ensuring seamless user experience across all devices.
- Developed and implemented the frontend for a custom Shopify storefront using the Shopify Storefront GraphQL API, enabling dynamic content delivery and enhanced user interaction
- Refactored the landing page with NuxtJS, DaisyUI, and TailwindCSS to align with evolving business needs, resulting in improved performance and a more modern, user-friendly interface.
- Collaborated with designers, developers, and key stakeholders to gather and translate business requirements into technical specifications, ensuring the final product met both aesthetic and functional goals.

Projects

Full-stack Blog App | *mongoDB, Express, React, NodeJS, TailwindCSS, React-Bootstrap*

- Developed a full-stack blogging app using MERN stack, cleanly decoupling front-end from back-end
- Implemented an API only backend to serve JSON to two front-ends: a client for viewing/commenting on posts and a CMS for publishing and editing posts/comments
- Utilized PassportJS, JSON Web Token and bcrypt for secure user authentication and protected routes

notbadreads | *React, Firebase, Tailwind CSS*

- Developed a Goodreads clone where users can search for books, organize a personal library and interact with other users
- Leveraged Google Books API for book data, allowing users to search and interact with a dynamic and robust database of books
- Utilized Firebase for simple and secure authentication and Firestore back-end-as-a-service to persist user data

Technical Skills

Languages: TypeScript, JavaScript, Liquid, HTML, CSS/SCSS
Web & mobile: React, React Native, Expo, Remix, React Router, Next.js, Vue, Nuxt, Node, Express, Tailwind CSS
Shopify: Themes, Storefront GraphQL, Customer Account API, embedded apps, Customer Account / checkout UI extensions, metaobjects, App Bridge, Polaris
Data & APIs: GraphQL (Apollo, codegen), Firestore, MongoDB/Mongoose, Prisma, REST, MySQL
Platform: Firebase (Auth, Functions, Storage), Mux, Sanity CMS, Git, Vite, EAS, Jest, Figma

Education

San Francisco State University San Francisco, CA
Bachelor of Arts in English: Creative Writing *September 2010 – July 2012*
